## **DETAILED ACTION**

### ***Application and Claims Status***

1. Claims 1-41 are currently pending and are under consideration in this Office Action.

### ***Election/Restrictions***

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-16, drawn to a display panel with a switching part formed in a unit pixel defined by the data and scan lines to control an output of the data signal in response to the scan signal.

Group II, claims 17-25, drawn to a method of manufacturing a display panel with the step of forming a scan line, a control electrode electrically connected to the scan line, and a storage capacitor line spaced apart from the scan line.

Group III, claims 26-32, drawn to a method of manufacturing a display panel with the step of forming a scan line, a control electrode electrically connected to the scan line, a first current supply line substantially in parallel with the scan line, and a storage capacitor line extended in a longitudinal direction.

Group IV, claims 33-41, drawn to a display apparatus with a column driver receiving an image signal and a first timing signal to output a data signal.

3. The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking Groups I-IV appears to be that they all relate to an OLED (organic light emitting diode) display apparatus with a voltage supply line. This special technical feature is well known in the art. Moreover, Dawson et al. (US Patent 6,229,506 B1)

Art Unit: 2629

disclose an OLED display apparatus with a voltage supply line (see e.g. Abstract; col. 1, lines 11-16; col. 2, line 55 thru col. 3, line 22; fig. 2). Therefore, the technical feature linking Groups I-IV does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
